- odourless
- no gas

FIRE LINE **AUTOMATIC** - Patented Technology

Long Fire burner 39" (990mm)

UL & CE certified

No chimney

Over 10h burning time

Reservoir 1.32 gal. (5L)

Burns bioethanol

Remote control

Safety sensors

LED display

Flame size regulation

Customized dimensionsh

**Fire Line Automatic** is designed for architects and interior designers. The versatile, linear burner can mount into a wall, onto a shelf, or used as a see-through or free-standing fireplace.

Fire Line Automatic is a completely safe, UL & CE certified device. The appliance is fully automatic with a large LED display and can be operated with a remote control. Additionally there is a 4-degree flame regulation option. The burner is made of stainless, acid proof steel with a powder coated base.

39"  
(990mm)

14 3/8"  
(365mm)

5 5/8"  
(143mm)

The efficiency of the burner is attributed to a technology, where only the fuel vapour is being burned, thus, optimizing the burning process. The technology is also one of the safest as there is no direct contact between the flame, high temperatures and the fuel. Electronic safety sensors control the device at all times when working or in standby mode. The appliance is shock-proof and CO<sup>2</sup> sensitive and it will react to any seismic activity, movement or the raise in the CO<sup>2</sup> concentration in a room. In case of any disturbances there is a warning signal and an alert appearing on the display is shown and the fire is extinguished automatically in an instant. Without a necessity for a chimney, it is a completely universal device that can be placed in any room with ventilation. It can be recessed into a wall, or purchased together with a steel casing allowing for installation into any material. Other options include incorporating the Fire Line Automatic into the Aquario, a free-standing elegant see-through fireplace or Duo Fire, a contemporary set of low tables for living room area.

Fanola® is a bioethanol based fuel for use in biofireplaces. It is of plant origin and is safe for environment as well as for humans. It burns completely and clean, meaning that while burning it produces only: heat, water vapour and CO<sup>2</sup> in amounts comparable to that of human breath.
